EDITOR'S NOTE

It is the attempt of this Index to collect, into a single source, a functional reference guide to the material published in CIRCULATION from its inception through 1975. Toward this end, the work has been arranged and the formats selected in a manner considered most convenient for the user.

While some of the formats make necessary the duplication of certain details, they have the advantage that each of the entries is a self-contained unit, which may be utilized without reference elsewhere. Conversely, and with particular reference to the Subject Index, entries alphabetized by key-words in the Title Index are not repeated in the Subject Index under those same key-words.

The tabular data given in the Chronology section will enable the reader to readily determine the year, month and issue number from the volume and page references used throughout the Index. The groupings in the Index to Features section, which collect articles that appeared under featured headings, is intended to provide an added dimension in the surveying of material of common interest. The Guide to Supplements offers a capsulized presentation of those publications.

Although it is not within the scope of this book to detail the 60,000+ pages to be found within its limits, it is hoped that it will add some measure to their usefulness.
